

CLAIMS

What is claimed is:

1. A child resistant pill package assembly comprising a base member and a top member spaced apart to define a hollow interior, a dial mounted on a platform for an annular pill pack assembly having a lower portion and an upper portion which projects through an opening in the top, means defining a plurality of radially outwardly circumferentially spaced teeth on the lower portion of the dial, a series of complementary teeth which project radially inwardly from the circular opening in the top and which mesh with the teeth on the lower portion of the dial when aligned therewith and flexible spring fingers normally biasing the dial outwardly so that the dial teeth and top teeth are in meshing relationship, application of pressure on the dial downwardly displaces the spring fingers so that the teeth are disengaged and confront the upper portion to permit rotation of the dial and pill pack.
2. A child resistant pill package assembly comprising a base member and a top member spaced apart to define a hollow

5

interior, a dial mounted on a platform for an annular pill pack assembly having a lower portion and a upper portion which projects though an opening in the top, means defining a plurality of radially outwardly circumferentially spaced teeth on the lower portion of the dial, a series of complementary teeth which project radially inwardly from the circular opening in the top and which mesh with the teeth on the lower portion of the dial when aligned therewith and means for discharging one pill at a time at a discharge opening in one of said members.
